

Using all the benefits of our technologies allowed us to change glued door perforation panel to integrated perforation. By using a special tool the air permeability increased to 75%. Higher permeability is available on a demand. At the same time we have changed the door frame design, which made the door much stronger now.

**NEW** Perforation

**OLD** Perforation

This new perforation is of course also applicable to the double door and side panels in racks with an extremely high need for ventilation. Production of the perforated part from one piece of material excluded the gluing process and it positively reflected in the price.

#### Configurator

Enter the type of the cabinet you require and then all the parameters. You'll get the appropriate part number and you can send it to our sales department for the price.

Type	RMA - Free-standing cabinet Delta S
Colour	RAL 7035 - light grey
Width	800 mm
Depth	800 mm
