

### A shelf for a keyboard and a mouse and a mouse

A use of a standard keyboard inside of a data cabinet is complicated due to dimensional reasons. Usually the keyboard is wider than the space between 19" vertical rails. The new keyboard and mouse shelf RAB-UP-X40-A1 solves this problem completely.

The keyboard and mouse are stored in the cabinet exactly to fit in between 19" vertical rails. An operating position comes up when the shelf is pushed out and the carrying part is turned in front of the cabinet.
